Fall 2025

Duration: 25 Minutes

Name:

ID:

Question [10 Points]

Consider the following LSTM unit.

Assume both the initial values of Long Term and Short Term memory values are set as 1. Now using two LSTM cells, predict the output value of Day 3 if input Day 1 and Day 2 values are 1.5 and 2 respectively.

Solution

Cell 1 (Day 1): <u>Forget Gate:</u> $f1 = \sigma(6.55) \approx 0.9986$ <u>Input Gate:</u> $i1 = \sigma(4.95) \approx 0.9930$ $c1\sim = \tanh(2.50) \approx 0.9866$ c1 = 1.9782 (Long Term) <u>Output Gate:</u> $o1 = \sigma(5.80) \approx 0.9970$ h1 = 0.9596 (Short Term)	Cell 2 (Day 2): <u>Forget Gate:</u> $f2 = \sigma(7.1990) \approx 0.9993$ <u>Input Gate:</u> $i2 = \sigma(5.6746) \approx 0.9966$ $c2\sim = \tanh(2.9994) \approx 0.9950$ c2 = 2.9684 (Long Term) <u>Output Gate:</u> $o2 = \sigma(5.4897) \approx 0.9959$ h2 = 0.9906 (Short Term)
--	--

Predicted output of Day 3 = **0.9906**
